Luther Taeleipu-Aiono

Statement for Stryker

Your ambulance stretchers are the reason I'm applying today. I've used them, I've been on them, and I've watched them get tinkered with. I've saved patients on them and had to watch patients pass away on them. They're amazing pieces of technology. They save backs, help with mobility, and move people from point to point. I want to be part of that. Plus, the Stryker sales representative I met at a career expo before I started nursing was so passionate about their products. Capital equipment is for me. If I have to study or travel to meet my targets, so be it.

PROFESSIONAL PROFILE

Practice Manager with a background in bush nursing, critical healthcare operations and client fulfillment. Bringing hands-on experience with various electronic medical system such as Tyro Health, best practice premier and EMR2, alongside practical work improving billing and administrative processes. With a technical understanding of computers, coding and design mindset for AI implementation.

Education

Bachelor's of Nursing (BoN)
Western Sydney University
2014 – 2019
Sydney, Australia

- Completed graduate-entry nursing training with clinical placements in operating theatres, general medicine, acute and subacute wards, paediatrics, intensive care and emergency care.

Mao Ming, China

- Participated in the organisational growth and coordination of student-led initiative to experience efforts as a construction project to build a sewerage pit with drainage. Maintain within the purview as an observer to the medical care provided to remote and isolated villagers as survivors of leprosy.
- Participated in cultural exchange with, at the time, medical outreach university good with Guangzhou University.

Postgraduate healthcare experience

Medical Practice Manager

Family Focus Medical
November 2024–Present

- Manage daily practice operations, coordinating with clinicians and staff while maintaining patient records, compliance and customer service.
- Improve administrative systems and billing processes, with responsibility for finance, accounts and debt management.

Information system

- Develop AI low-risk safe guards such as detection policies and methodologies when deploying artificial intelligence i.e. What I coin as closed-loop feedback system to improve accuracy of context, token efficiency and pseudo-distillation (without breaking the rules)
- Research and developed workflow methodologies with a mix of AI and human written code, to improve incremental innovation through evaluating how correspondence arrives to our medical records with reconcile markers of improvement.

Other field experience

- Use performance measures to guide operations and help the team understand financial targets. Make reporting practical, so people can connect the numbers with their daily work.
- Coordinate recruitment, on boarding and training, and develop policies supporting privacy, accreditation and risk management.
- Encourage a supportive workplace through positive reinforcement. Help people understand their contribution and feel motivated in their work.

Quality & performance experience

- Use quality indicators to make sense of data, identify what needs attention and check whether changes are working.
- Simplify repetitive workflows using JavaScript and Python. Build automation that handles routine work in the background, with final checks before completion.
- Listen to customer and patient feedback, then use it to guide practical improvements and track progress. Being human matters to me: listening properly, taking concerns seriously and responding with care.

Registered Nurse

Serco - RAAF Richmond
March 2025–March 2026
Sydney, Australia
